

STERILE ALLOGRAFT RINGS AND ARCS FOR OPHTHALMIC SURGICAL PROCEDURES

KeraNatural®

KeraNatural® Sterile Allograft Rings and Arcs are advanced, ready-to-use corneal tissue products designed for ophthalmic surgical procedures. These allografts provide surgeons with high-quality, sterile, and easy-to-handle solutions for a variety of corneal repair and reconstruction needs.

KEY FEATURES

Sterile and Ready-to-Use:

Terminally sterilized using validated processes, eliminating the need for additional preparation.

Consistent Quality:

Sourced from rigorously screened donors and processed under strict quality controls.

Long Shelf Life:

Extended storage capability at room temperature, reducing waste and improving inventory management.

Customizable Options:

Available in multiple sizes and thicknesses to accommodate various surgical requirements.
